ABOUT ME

Experienced backend developer with 2.5 years of hands-on expertise in Java, now transitioning into web development with a strong focus on PHP and MySQL. Skilled in designing and implementing efficient, scalable, and secure applications. Passionate about solving complex problems, optimizing database-driven systems, and enhancing user experience through clean and reliable code. Adept at collaborating in agile teams, quickly adapting to new technologies, and continuously improving technical skills to deliver high-quality software solutions.

WORK EXPERIENCE

CAPGEMINI TECHNOLOGY SERVICES
2021 - 2024

- Assisted in defect identification and correction, improving system stability and reducing downtime.
- Performed analysis of existing systems to enhance functionality and optimize performance.
- Managed and maintained MySQL databases, ensuring data integrity and efficient queries.
- Contributed to new feature development, enhancing product usability and meeting client requirements.
- Collaborated with senior developers and cross-functional teams in an agile environment.

PROJECTS

1. Online Spices & Bakery Store (PHP, MySQL)
 - Developed a fully functional e-commerce web application for managing bakery and spice products.
 - Implemented product listing, cart, checkout, discounts, and user authentication modules.
 - Designed and optimized MySQL database schema for product, order, and user management.
 - Added admin dashboard for product, discount, and order tracking.
2. Travel Booking Website (PHP, Laravel, MySQL)
 - Built a travel management platform with features for destinations, packages, bookings, and user management.
 - Implemented role-based admin panel for managing users, destinations, and packages.
 - Integrated filters, sorting, pagination, and export features for admin dashboards.
 - Ensured responsive UI using Bootstrap and followed secure coding practices.
